

Awareness Program on Protecting Environment and Plantation, **Cleaning school premises**

We entered the village at around 9 am and the villagers and village representatives received the NSS team. After that we had a short meeting with villagers and village representatives and discussed our plan of Special camp with all of them. We started our day 1 activity after the prayer song in the Government school building along with school students. We conducted a rally on Protecting Environment and Plantation in the morning session in the entire village explaining the importance of protecting the environment and growth of plantation. We explained that the adverse effects of environment such as global warming, decrease in the rainfall etc are because of deforestation. We encouraged the villagers to grow plants which will decrease the problems that the environment is facing now. After having lunch, we cleaned the school premises in the village where a lot of unwanted thorn bushes are existing. All the boys and girls participated with high energy in cleaning the school premises. We collected the waste plastic materials in the school premises and disposed in the outskirts of the village. After cleaning the school premises, we explained the school children the importance of maintaining cleanliness in the school premises and all the school children responded positively to our suggestions.
